

WHY IS MY EMAIL ATTACHMENT A PDF?

Email attachments from Microsoft Office versions older than 2007 (files ending in .doc / .ppt / .xls) are being used to spread Crypto Ware and other viruses. In response to this security threat, we are now automatically converting these older files to PDF to help prevent the spread of viruses.

How Email Is Protected From Potentially Harmful Attachments

If you receive a file from Microsoft versions prior to 2007, your attachment will automatically convert to the .pdf version or you will get an automated message letting you know the file was blocked.

If you need the original file format, please ask the sender to click "File Save As"; then click on the "Save as type:" dropdown and choose an acceptable file extension (like the ones listed below) to convert the file so they can resend the message.

Acceptable File Extension Formats

- Word Document (*.docx)
- Excel Workbook (*.xlsx)
- PowerPoint Presentation (*.pptx)
